Public Health Dept. identifies 44 priority issues for the county

Some of the issues
indoor air pollution
well water contamination
waste pits at drilling sites
workplace injuries and illnesses
hydraulic fracturing chemicals
diseases that can be transmitted to people by animals
food contamination
dust and smoke

GLENWOOD SPRINGS, CO COLORADO,

Garfield County Public Health's C.A.R.E.S. Project is readying for a big step: unveiling a prioritized list of 44 environmental health issues identified by Garfield County residents.

C.A.R.E.S. stands for "Community Action for Responsible Environmental Solutions." Environmental health issues are things in the environment with a negative impact on human health, both immediately or in the long term.

A series of the public open houses will be held in county communities the week of May 17. The open houses are part of a series of efforts to engage the county community in reaching consensus on the most significant environmental health issues facing Garfield County.

Headed by Jim Rada, Garfield County environmental health manager, the C.A.R.E.S. Project is designed to give Garfield County Public Health a firm foundation for moving ahead to meet county needs. Project results will be presented on June 21 to the Board of County Commissioners in its role as the Board of Health.

August 1 marks five years on the job for Rada, now heading a staff of three. "There's been a lot on our plate with the rapid community and industrial growth in the county," Rada allows. "This is the chance to get a comprehensive look at where the county's environmental health program needs to go now."

The online priority-setting process began a few weeks ago with invitations to selected representatives of Garfield County residents. Covering the demographic, geographic, and other important characteristics of the county, the group reached consensus on priorities for the 44 identified issues.

Issues range from indoor air pollution to well water contamination, waste pits at drilling sites to workplace injuries and illnesses, hydraulic fracturing chemicals to diseases that can be transmitted to people by animals, and food contamination to dust and smoke. The final priority list will be available mid-May.

The current list of 44 environmental health issues is posted on the project's website, www.garfieldcountycares.com. Also listed are the specific dates and times for open houses in Battlement Mesa, Parachute, Rifle, Silt, New Castle, Glenwood Springs and Carbondale. Open houses are scheduled for late afternoon and early evening Monday through Thursday, May 17-20.

Open houses

Monday, May 17, 4:30-6:30 p.m., Glenwood Springs City Council room, 101 W. Eighth St.

Tuesday, May 18, 2-3:30 p.m., Battlement Mesa Activity Center, 0398 Arroyo Drive.

Tuesday, May 18, 4:30-6:30 p.m., Parachute Town Hall, in the Town Council room, 222 Grand Valley Way.

Wednesday, May 19, 4:30-6:30 p.m., Carbondale City Hall in Community Room #2, 511 Colorado Ave.

Wednesday, May 19, 4:30-6:30 p.m., New Castle Recreation Center, Conference Room # 1, 450 W. Main St.

Thursday, May 20, 4:30-6:30 p.m., Silt Fire Station training room, Burning Mountains Fire Protection District, 611 Main St.

Thursday, May 20, 4:30-6:30 p.m., Rifle, Health And Human Services Bldg., 195 W. 14th St.

Residents can drop by any open house to share their reactions to the C.AR.E.S. Project results to date. There will be refreshments.

Rada hopes the open houses will also be a means to identify county residents interested in tackling the top priority issues to reduce risk exposure. The current work is the first phase of the C.A.R.E.S. project. Next will come, Rada hopes, partnerships with county residents and community organizations to search for community-based solutions to the top environmental health issues.

The facilitation contractor will provide a written report, including findings, analyses, conclusions, recommendations, and materials generated during the facilitation to Garfield County Public Health.

Garfield County Public Health hopes to foster a continuing level of interest among respondents and other Garfield County citizens by conveying details of the consensus on environmental health issues and priorities through the project website over coming months.

GUEST COMMENTARY

Public Health Dept. identifies 44 priority issues for the county

Garfield County Public Health's C.A.R.E.S. Project is readying for a big step: unveiling a prioritized list of 44 environmental health issues identified by Garfield County residents.

C.A.R.E.S. stands for "Community Action for Responsible Environmental Solutions." Environmental health issues are things in the environment with a negative impact on human health, both immediately or in the long term.

A series of the public open houses will be held in county communities the week of May 17. The open houses are part of a series of efforts to engage the county community in reaching consensus on the most significant environmental health issues facing Garfield County.

Headed by Jim Rada, Garfield County environmental health manager, the C.A.R.E.S. Project is designed to give Garfield County Public Health a firm foundation for moving ahead to meet county needs. Project results will be presented on June 21 to the Board of County Commissioners in its role as the Board of Health.

August 1 marks five years on the job for Rada, now heading a staff of three. "There's been a lot on our plate with the rapid community and industrial growth in the county," Rada allows. "This is the chance to get a comprehensive look at where the county's environmental health program needs to go now."

The online priority-setting process began a few weeks ago with invitations to selected representatives of Garfield County residents. Covering the demographic, geographic, and other important characteristics of the county, the group reached consensus on priorities for the 44 identified issues.

Issues range from indoor air pollution to well water contamination, waste pits at drilling sites to workplace injuries and illnesses, hydraulic fracturing chemicals to diseases that can be transmitted to people by animals, and food contamination to dust and smoke. The final priority list will be available mid-May.

The current list of 44 environmental health issues is posted on the project's website, www.garfieldcountycares.com. Also listed are the specific dates and times for open houses in Battlement Mesa, Parachute, Rifle, Silt, New Castle, Glenwood Springs and Carbondale. Open houses are scheduled for late afternoon and early evening Monday through Thursday, May 17-20.

Some of the issues

indoor air pollution
well water contamination
waste pits at drilling sites
workplace injuries and illnesses
hydraulic fracturing chemicals
diseases that can be transmitted to people by animals
food contamination
dust and smoke

Open houses

Monday, May 17, 4:30-6:30 p.m., Glenwood Springs City Council room, 101 W. Eighth St.

Tuesday, May 18, 2-3:30 p.m., Battlement Mesa Activity Center, 0398 Arroyo Drive.

Tuesday, May 18, 4:30-6:30 p.m., Parachute Town Hall, in the Town Council room, 222 Grand Valley Way.

Wednesday, May 19, 4:30-6:30 p.m., Carbondale City Hall in Community Room #2, 511 Colorado Ave.

Wednesday, May 19, 4:30-6:30 p.m., New Castle Recreation Center, Conference Room # 1, 450 W. Main St.

Thursday, May 20, 4:30-6:30 p.m., Silt Fire Station training room, Burning Mountains Fire Protection District, 611 Main St.

Thursday, May 20, 4:30-6:30 p.m., Rifle, Health And Human Services Bldg., 195 W. 14th St.

Residents can drop by any open house to share their reactions to the C.AR.E.S. Project results to date. There will be refreshments.

Rada hopes the open houses will also be a means to identify county residents interested in tackling the top priority issues to reduce risk exposure. The current work is the first phase of the C.A.R.E.S. project. Next will come, Rada hopes, partnerships with county residents and community organizations to search for community-based solutions to the top environmental health issues.

The facilitation contractor will provide a written report, including findings, analyses, conclusions, recommendations, and materials generated during the facilitation to Garfield County Public Health.

Garfield County Public Health hopes to foster a continuing level of interest among respondents and other Garfield County citizens by conveying details of the consensus on environmental health issues and priorities through the project website over coming months.

OPEN HOUSE NEXT WEEK: comment on environmental issues that may affect Garfield County's health

Inbox x

Diana Royce Smith to JCWsnowshoe, mokeefe, albrechtg, tre, dn show details May 11 Reply

Hello!

I am sending this information to you because Jim Rada, Garfield County's Environmental Health Manager and his staff, probably visited your club at some time to discuss the project involving the work described below.

Garfield County later hired my firm to serve as facilitation contractor and help to develop consensus across Garfield County residents on priorities for Environmental Heath issues.

As current Secretary-Treasurer of Boulder, CO, Rotary Club, I respectfully ask your help in disseminating this information to members of your clubs, and through them -friends and associates - so that everyone who would like to participate in Garfield County Public Health open houses May 17-20, 2010, has the information.

With kind regards and thanks,

Diana Royce Smith
President, Royce Arbour, Inc.
Hands-On Help for Management

Please forward this message to friends, neighbors, service organizations, businesses, etc. in Garfield County-

OPEN HOUSE: comment on environmental issues that may affect our health

Hosted by Garfield County Public Health

- **Stop by one of the 7 different open houses (one in each town listed below).**
- **There you will see 44 posters with environmental health issues on them. These are environmental issues that may affect our health here in Garfield County.**
- **Place a marker on the 5 issues you think are most important.**
- **Grab some refreshments and go.**
- **Or email your thoughts directly at www.GarfieldCountyCARES.com**

OPEN HOUSE times, dates, locations:

Mon., May 17, 4:30-6:30 p.m., **Glenwood Springs** City Council Room, 101 West 8th Street.
Tues., May 18, 2-3:30 p.m., **Battlement Mesa** Activity Center, 0398 Arroyo Drive.
Tues., May 18, 4:30-6:30 p.m., **Parachute** Town Hall, 222 Grand Valley Way.
Wed., May 19, 4:30-6:30 p.m., **Carbondale** City Hall, 511 Colorado Avenue.
Wed., May 19, 4:30 – 6:30 p.m., **New Castle** Recreation Center, 450 West Main Street.
Th., May 20, 4:30-6:30 p.m., **Silt** Fire Station, 611 Main Street.
Th., May 20, 4:30 – 6:30 p.m., **Rifle,** Health & Human Services Bldg., 195 W. 14th Street.

About these links

From: Garfield County Public Health <cgodes@garfield-county.com>
Date: May 19, 2009 10:25:28 AM MDT
To: diana@roycearbour.com
Subject: Garfield County to examine issues in local environment impacting health
Reply-To: cgodes@garfield-county.com

Garfield County C.A.R.E.S.

(Community Action for Responsive Environmental Solutions)

Recent EH Issues in Garfield County Environmental Health

Stormwater and erosion control concerns at a local ranch

Odors from frac tank storage facility

Leaking fluids from trash hauling trucks

Trash burning at a commercial business

Sanitation concerns at a local spa and tattoo operation

H1N1 (Swine flu) in Garfield County residents

New retail food businesses with regulatory questions

Water and wastewater system upgrades in Rifle, Glenwood Springs and New Castle

EH interacts routinely with community members on a wide-range of topics. These were some of this month's highlights.

The CARE Roadmap

1. Form a broad-based partnership of non-profits, community groups, schools, businesses, state, and local agencies.

2. Identify problems and solutions. Partners will work to assess toxics problems in the community and review options for reducing risks.

Will you help us?

THE CARE HISTORY
In late 2007, Garfield County Public Health, Environmental Health program received $99,635 in grant funding through the EPA CARE program. The program is designed to help our County determine what its main environmental health risks are and how to take action to begin reducing them.

You were added to this e-newsletter after signing up for updates during one of our community CARE presentations at your service club or organization. Thank you for your on-going interest in this community improvement process. If you are not one of these people, we would still love for you to be involved.

If you had the financial resources to improve one thing in our local environment...

What would it be? This is exactly the question the Garfield County CARES team is working to answer. The team has hired contractor Royce Arbour, Inc. to begin identifying citizens in our community who are willing to share their thoughts about environmental health problems we face.

As the process moves forward and problems are identified the CARE team will submit for EPA grant funds to begin implementing solutions.
What will the process entail?

1. The first step is to find individuals who represent the diversity we have in Garfield County. We're looking for business professionals, ranchers, industry workers, soccer mom's and everyone in-between.
2. We will work with our dynamic consultant group Royce Arbour, Inc. to develop a process of educating our volunteers on environmental issues that affect our local health. We do not expect our volunteers to have to spend large amounts of time on this project or have any technical expertise. What we *are* looking for is a passion for improving situations in our local environment that may be impacting health in a negative way.
3. The process *may look like* a series of community conversations, personal interviews, tours of different sources of concern, etc. Some volunteers may be involved in one or all of the aspects of the CARE process as their time and interest levels permit.
4. The end result is to identify the top issues that our community would like to see addressed. As your local Environmental Health agency we are committed to working towards solutions to the problems identified through this process. In fact, the CARE process will help to shape the future priorities of the Garfield County Environmental Health Program.

We have resources, we need to know about your concerns...

You may soon receive a call or email from one of our consultants. This is your opportunity to tell them what your concerns are.

It is not often that you hear- "*We have resources- we need to know about your concerns.*"

Please forward this email to others who you feel would be important advocates for our community's health and ask them to join this email distribution list.

We look forward to a dynamic and interesting community exchange. We hope that we can count on you to be a part of the process.

Sincerely,

Jim Rada
Environmental Health Manager
Garfield County Public Health

3. Implement Solutions/Reduce Risks

The partnership will identify the combination of programs that best meet the community's needs. EPA funding helps to implement these projects.

4. Become Self Sustaining

The community develops new ways to attract funding and partners into the collaborative to build on its success. New problem assessments are completed and new solutions identified.

11.7.3 Materials

11.7.3.1 Issues Posters

- Posters describing issues hung at GCPH Open Houses (see Appendix 11.7.4.2 for pictures)
  (44 pages)

11.7.3.2 Directions Signage

- Picture of directions sign posted at GCPH Open Houses
- Welcome sign posted at GCPH Open Houses
  (3 pages)

11.7.3.3 Handout Cards

- Printout of informational cards distributed at GCPH Open Houses
  (1 page – two sided)

1. Bacteria and **Other Contaminants** in **Food,** due to unsafe food handling in retail food establishments and homes, transmit illness.	Priority #
1. **Las BACTERIAS y OTROS CONTAMINANTES en los ALIMENTOS** transmiten enfermedades cuando los alimentos no se manejan de manera segura en el hogar o en los restaurantes.	

2. Chemicals Used in **Hydraulic Fracturing** of natural gas wells may contaminate soil, ground water, and drinking water supplies that are essential to human health.	Priority #
2. **Las SUSTANCIAS QUÍMICAS USADAS en el FRACTURAMIENTO HIDRÁULICO** de pozos de gas natural pueden contaminar el suelo, el agua subterránea y las reservas de agua potable que son esenciales para la salud de las personas.	

3. Disease like Rabies, West Nile Virus, Hantavirus, and Plague are transmitted to humans by insects and animals.	Priority #
3. Los insectos y animales transmiten **ENFERMEDADES** tales como la rabia, virus del Nilo Occidental, hantavirus y pestes a los humanos.	

4. Drivers Using Cellphones or **Other Distractions** threaten the health and safety of others on the roadways.	Priority #
4. **Las PERSONAS QUE USAN TELÉFONOS CELULARES u OTROS TIPOS DE DISTRACCIÓN MIENTRAS CONDUCEN** ponen en peligro la salud y la seguridad de otros que circulan en la calle.	

5. Electromagnetic Fields from power lines and transmission towers may have human health consequences, potentially including cancer and other unknown hazards.	Priority #
5. **Los CAMPOS ELECTROMAGNÉTICOS** que generan los cables de alta tensión y las torres de transmisión pueden tener consecuencias para la salud de las personas, como cáncer y otros peligros desconocidos.	

6. Emissions from manufacturing and industry sources, vehicles, open burning, forest fires, fireplaces, lawnmowers, and many other sources, create outdoor air pollution that can be a human health hazard.	Priority #
6. **Las EMISIONES** de industrias y fábricas, vehículos, fuegos al aire libre, incendios forestales, chimeneas, cortadoras de césped y muchas otras fuentes generan polución en el ambiente exterior que puede representar un peligro para la salud de las personas.	

7. Emissions that may include Volatile Organic Compounds (VOC's) from drilling anywhere, including next to Battlement Mesa golf course, could affect the health of golfers and residents.	Priority #
7. **Las EMISIONES**, que pueden incluir compuestos orgánicos volátiles (VOC, por su sigla en inglés) como los generados en los pozos petroleros junto al campo de golf de Battlement Mesa, podrían afectar la salud de los golfistas y los residentes.	

8. Exposure to Benzene from gas wells in proximity to residents may cause or worsen human health problems, such as nerve and bone marrow damage.	Priority #
8. **La EXPOSICIÓN al BENCENO** proveniente de pozos de gas cerca de una zona residencial podría provocar enfermedades en las personas o agravarlas, como por ejemplo, lesiones en los nervios y la médula ósea.	

9. Exposure to Lead from paint in older homes, imported children's toys, and tailpipe gases in high-traffic corridors harms the growth and development of children, including exposure before they are born.	Priority #
9. **La EXPOSICIÓN al PLOMO** existente en la pintura de las casas antiguas, los juguetes importados y los gases emitidos por caños de escape en avenidas de mucho tráfico perjudican el crecimiento y desarrollo de los niños, incluso si se los expone al plomo antes del nacimiento.	

10. Farm Animal Illness and Reproduction should be recognized as warnings about environmental exposures with potential to impact human health.	Priority #
10. **Las ENFERMEDADES y los PROBLEMAS DE REPRODUCCIÓN de los ANIMALES DE GRANJA** deberían considerarse advertencias de peligro medioambiental con la posibilidad de afectar la salud de las personas.	

11. Fluoride in public drinking water supplies prevents tooth decay.	Priority #
11. **El FLUORURO** en el suministro de agua potable pública previene las caries.	

12. Focus on Sustainable Community Planning helps people take steps toward energy efficiency, zero waste, energy-conserving transportation, green building, and natural resource conservation.	Priority #
12. **El ENFOQUE en la PLANIFICACIÓN COMUNITARIA SOSTENIBLE** ayuda a las personas a tomar los pasos que conducen a la eficiencia energética, la eliminación de los desperdicios, el uso de medios de transporte que conservan energía, la construcción ecológica y la protección de los recursos naturales.	

13. Gas Well Emissions into the air, including flaring and venting natural gas, release known and unknown substances, which may cause human health problems.	Priority #
13. **Las EMISIONES de los POZOS DE GAS al AIRE**, por ejemplo, cuando se quema el gas sobrante o se arroja gas a la atmósfera, liberan sustancias conocidas y desconocidas que podrían causar enfermedades en las personas.	

14. Ground-Level Ozone formed as a result of driving, fueling, solvent use, industrial emissions, etc., is a harmful air pollutant that affects human health.	Priority #
14. **El OZONO a NIVEL del SUELO** que se forma por el uso de vehículos, combustibles y solventes, las emisiones industriales, etc., es un contaminante perjudicial del aire que afecta la salud de las personas.	

15. Heavy Large Vehicle Traffic on roads not constructed for them creates road damage and may be hazardous for other vehicles and roadside activity.	Priority #
15. **El TRÁFICO PESADO de GRANDES VEHÍCULOS** en carreteras o caminos que no fueron construidos para ese tipo de vehículos causa daños en el camino y puede ser peligroso para otros vehículos y para las actividades a los lados de la carretera.	

16. Household Hazardous Waste including pharmaceuticals and personal care products, fluorescent light bulbs, paint, cleaning products, etc., may contaminate drinking water.	Priority #
16. **Los RESIDUOS PELIGROSOS en el HOGAR**, que incluyen productos farmacéuticos, de cuidado personal y de limpieza, lámparas fluorescentes, pintura, etc., pueden contaminar el agua potable.	

17. Household Water Well Contamination by bacteria and other organisms due to mining activity, grazing animals, leaking septic systems or storm water runoff, may cause serious illness.	Priority #
17. **La CONTAMINACIÓN de los POZOS de AGUA RESIDENCIALES** con bacterias y otros organismos, a causa de actividades mineras, pastoreo de animales, fugas en los sistemas sépticos o escurrimiento de agua de lluvia, puede provocar graves enfermedades.	

18. Improper Disposal of Garbage and Litter on both public and private lands may contaminate water and shelter animals that carry disease to humans.	Priority #
18. **La ELIMINACIÓN INCORRECTA de BASURA y DESPERDICIOS** en terrenos públicos y privados puede contaminar el agua y atraer animales que transmiten enfermedades a las personas.	

19. Indoor Air Pollution accumulating in high concentration from cleaning products, fireplaces, stoves, paints, solvents, cigarette smoke, and chemicals used in building materials and home furnishings can contribute to a variety of health problems including asthma.	Priority #
19. **La CONTAMINACIÓN del AIRE en ESPACIOS CERRADOS** que se acumula en altas concentraciones y proviene de productos de limpieza, chimeneas, estufas, pinturas, solventes, humo de cigarrillo y productos químicos utilizados en materiales de construcción y muebles para el hogar puede contribuir a una variedad de enfermedades, inclusive el asma.	

20. Infectious Disease spreads more easily when people are not fully immunized.	Priority #
20. **Las ENFERMEDADES INFECCIOSAS** se contagian con más facilidad cuando las personas no han recibido todas las inmunizaciones correspondientes.	

21. Light Pollution at night may interfere with normal daily cycles that regulate and maintain human health.	Priority #
21. **La CONTAMINACIÓN por LUZ ARTIFICIAL** en la noche puede interferir con los ciclos diarios normales que regulan y mantienen la salud de las personas.	

22. Magnesium Chloride used on roads to melt snow and ice and reduce dust is a health concern for some individuals.	Priority #
22. **El CLORURO de MAGNESIO** que se emplea en las calles para derretir la nieve y el hielo, y reducir el polvo es considerado por algunas personas como un factor que puede afectar la salud.	

23. Meth Labs create risks of fire and explosion and toxic chemicals that contaminate the interiors of buildings where meth labs are located and are challenging to clean up.	Priority #
23. **Los LABORATORIOS de METANFETAMINAS** crean un riesgo de incendio y explosión, y es difícil eliminar las sustancias químicas tóxicas que contaminan el interior de los edificios donde se encuentran los laboratorios.	

Priority #

24. More Outdoor Toilets would reduce the possibility of contaminating the surface waters and causing illness.

24. **Si hubiera MÁS INODOROS en LOS ESPACIOS al AIRE LIBRE** se reduciría la posibilidad de contaminar las aguas superficiales y causar enfermedades.

25. More People Understanding the Impact of Environmental Factors on human health in Garfield County would improve residents' health.	Priority #
25. **Si MÁS PERSONAS COMPRENDIERAN el EFECTO de los FACTORES MEDIOAMBIENTALES** en la salud se mejoraría la salud de los residentes del condado de Garfield.	

26. Noise Pollution can produce stress reactions, such as increases in blood pressure, pulse rate, and hormone secretion that over time damage people's circulatory systems.	Priority #
26. **La CONTAMINACIÓN por RUIDO** puede producir reacciones de tensión, como aumento en la presión sanguínea, pulso y secreción de hormonas, que con el transcurso del tiempo perjudican el sistema circulatorio de la persona.	

27. Not Enforcing Environmental Laws and Regulations leads to environmental health problems.	Priority #
27. **El INCUMPLIMIENTO de las LEYES y REGLAMENTACIONES MEDIOAMBIENTALES** conduce a problemas de salud causados por el medio ambiente.	

28. Not Enforcing Labor Laws and Regulations leads to unsafe working conditions.	Priority #
28. **El INCUMPLIMIENTO de las LEYES y REGLAMENTACIONES LABORALES** genera condiciones de trabajo inseguras.	

29. Odors and Fumes emitted from gas wells close to residential housing causes some residents to feel ill in and around their homes.	Priority #
29. **Los OLORES y VAPORES** que salen de pozos de gas próximos a viviendas son la causa de que algunos residentes se sientan enfermos dentro y fuera de sus hogares.	

30. Overcrowded Housing leads to the spread of contagious illness.	Priority #
30. **Las VIVIENDAS con MUCHOS OCUPANTES** conducen a la propagación de enfermedades contagiosas.	

31. Pollution of Colorado River Water used for human consumption, may occur if drilling takes place too close to the river.	Priority #
31. **El AGUA del RÍO COLORADO que se usa para consumo humano SE PUEDE CONTAMINAR** si se realizan perforaciones muy cercanas al río.	

32. Radon a radioactive gas found in soil, rock and water from naturally occurring uranium, with long exposure, can lead to lung cancer when it accumulates in homes where families spend time.	Priority #
32. **El RADÓN**, un gas radioactivo que se encuentra en el suelo, las rocas y el agua y proviene del uranio que está presente de manera natural, puede provocar cáncer de pulmón tras una prolongada exposición si se acumula en las casas donde viven las familias.	

33. Release of Radioactive Contaminants into water, soil, and air from drilling where nuclear device was once detonated may cause health problems.	Priority #
33. **La LIBERACIÓN de CONTAMINANTES RADIOACTIVOS** en el agua, el suelo y el aire originada a partir de una perforación en un lugar donde hubo una explosión nuclear puede causar enfermedades.	

34. Response to Environmental Emergencies to protect human health should be part of emergency preparedness plans.	Priority #
34. **La RESPUESTA ante EMERGENCIAS MEDIOAMBIENTALES** para proteger la salud de las personas debe formar parte de los planes de preparación para emergencias.	

35. Small Solid Particles of Dust created by construction, land development, crushing gravel, mining, and traffic on paved and unpaved roads, lodge deep in people's lungs and cause health problems.	Priority #
35. **Las PEQUEÑAS PARTÍCULAS SÓLIDAS de POLVO**, que se desprenden de la construcción, el acondicionamiento de la tierra, la trituración de grava, la minería y el tráfico en calles pavimentadas y no pavimentadas, se depositan en los pulmones de las personas y provocan enfermedades.	

36. Transient Housing Sites may be sources of soil and water contamination that have bad effects on human health.	Priority #
36. **Los LUGARES de RESIDENCIA TRANSITORIA** pueden ser fuentes de contaminación del suelo y el agua que tienen efectos negativos en la salud de las personas.	

37. Ultraviolet (UV) Radiation whether from the sun or from tanning beds, is the major cause of skin cancer.	Priority #
37. **La RADIACIÓN ULTRAVIOLETA (UV)**, ya sea que provenga del sol o de camas solares, es la principal causa de cáncer de la piel.	

38. Walking and Cycling Paths and Recreation Opportunities would encourage physical activity essential to maintaining good health.	Priority #
38. **Los SENDEROS para CAMINAR Y ANDAR en BICICLETA, así como las ACTIVIDADES RECREATIVAS,** promoverían la actividad física que es fundamental para mantener un buen estado de salud.	

39. Waterborne and Water-Related Disease Transmission by storm water runoff picking up dangerous materials from households, construction sites, agricultural production, and other locations.	Priority #
39. **La TRANSMISIÓN de ENFERMEDADES a través del AGUA** podría ocurrir si el escurrimiento de agua de lluvia transportara materiales peligrosos de los hogares, sitios de construcción, establecimientos de producción agrícola y otros lugares.	

40. Inconsistent Handling of Workplace Injuries, Illness and Exposure to Hazardous Materials makes it hard to develop comprehensive occupational health and safety programs.	Priority #
40. **Si SE TOMAN MEDIDAS NO UNIFORMES con respecto a las LESIONES, ENFERMEDADES y EXPOSICIÓN a los MATERIALES PELIGROSOS en el LUGAR de TRABAJO** resulta difícil elaborar programas integrales de salud y seguridad laboral.	

41. Waste Pits at Drilling Sites and Burying Waste Pit Liners on Site may leach, contaminating ground and surface water, and harm human health.	Priority #
41. **Las FOSAS DE BASURA en los LUGARES DE PERFORACIÓN y LOS FORROS de FOSAS de BASURA ENTERRADOS** pueden desprender sustancias, contaminando las aguas subterráneas y superficiales, y perjudicar la salud de las personas.	

42. Leaving Road Kill to Decay on roadsides may cause health issues in humans.	Priority #
42. **Si SE DEJA ABANDONADO el CADÁVER de un ANIMAL ATROPELLADO en la CARRETERA** a un costado de la ruta, se pueden originar problemas de salud en las personas.	

44. Using Radioactive Mine Tailings as Construction Fill allows leaching into soils and ground water with negative human health impacts.	Priority #
44. **La UTILIZACIÓN de DESECHOS de MINERÍA RADIOACTIVOS como RELLENO para la CONSTRUCCIÓN** permiten que se filtren sustancias radioactivas en el suelo y el agua subterránea, generando consecuencias negativas en la salud de las personas.

Battlement Mesa					
	1	6		1	Yes. Absolutely. We must be prepared to meet environmental emergencies, human caused and natural
	2	10	My #1	1	Taking over a year to determine a leak @ prather's is too long
	2		Enforcing environmental laws is critically important. It can lead to problems especially as industry interfaces with residents.		
	2		Recycling glass, plastic, paper, cardboard, etc. can help		
	2		#1		
	3			1	We depend on our food providers to keep bacteria from the things we consume. If these standards lapse, we will all be at risk.

GarCo CARES Open House Comments

	4			1	Meth labs do not belong in areas near people. The increased risk of fire is heightened when toxic chemicals are used and released into the environment.
	5	6	Benzene is known to cause cancer	2	Benzene is a dangerous chemical. The risk to human health is too great. Use of benzene and other toxic chemicals near people (their homes, schools, businesses, etc) should be eliminated.
	5				Toxic chemicals of all kinds are a threat if used.
	6	12	#2	1	Spills not acceptable
	6		#2		
	7	10	#3		
	7		Our rivers are already polluted		
	7		Contaminates crops also		
	8	2		2	Sustainable community planning is critical to a livable future. If we continue to live beyond our means it may cause our environmental systems to collapse.
	8				This is so important, however, I has to put gas drilling related hazards as my priority.
	9			3	and release of Radon
	9				If regulations are not stiffly imposed on gas drilling in our area, the government will have a massive cleanup here, just like the tailings in Utah.
	9				Radioactive tailings should NOT be used as construction fill...what are you thinking? It takes years for radioactive tailings to decay. We should not be drilling around the Ruleson blast site for these reasons.
	10			3	Blank

GarCo CARES Open House Comments

	10				This is already a state law...and a good one! It should be a federal law.
	10				This is a national problem.
	11	7	Very top priority	2	Odors and fumes (like light pollution and noise pollution) is difficult to quantify. Odors and fumes can have an impact on resident people. We expect clean air-not impacted by odors and fumes.
	11		#4		Setbacks needed greater than 500 feet
	13	14	#5	2	Blank
	13		#3 and leaving tailings at site		I am concerned about waste pits and their possible contamination of the air
	13		The company we work for has a system in place to recycle these pond/pit liners in concrete		
	13		Controlled disposal no burying on site		
	14			2	Water pollution is water pollution. Household water wells are just as important to keep clean. People drink this water! It must be clean!
	14				and poor seals on gas wells
	15			1	We need to dispose of garbage and litter in a clean, safe way. Battlement Mesa does a pretty good job with this. Don't let up!
	16	4	#5	2	Blank
	16				We ride bicycles weekly around Battlement Mesa. The heavy truck traffic makes it difficult and dangerous. It didn't used to be that way 5 years ago. Although very recently the truck traffic has decreased, the damage to the roads hasn't.
	20	1		3	Also into homes thru gas transmission
	20				There should be no drilling close to this 1969 bomb site.

GarCo CARES Open House Comments

	20				We should not be releasing radioactive contaminants into our water. We already know about the bad effects radioactivity can have on human health. Do we need more evidence than Chernobyl or Nagasaki or Hiroshima?
	21	1	A lot of people need to be educated	1	How? Education is important but there may not be a direct association with human health.
	22			1	Lead is a toxin that we have been exposed to for years...an industrial addent that we did not know had implications for human health, especially in children
	23			1	We don't know enough about genetically modified foods. We do know that rampant use of antibiotics to produce greater milk producers has led to a medical crisis with people becoming immune to common antibiotic strains.
	24			2	Noise pollution is difficult to quantify. It can be damaging. From some noise there is no way to get away from it- that causes negative health effects.
	24				Blank
	27			1	We should all be conscious of the quality of our indoor air. It can sometimes be more dangerous to our health than the outdoor air. Again, education about these dangers is important.
	29			2	Sleeping in darkness and quiet are essential to human health. Being able to view the night sky reconnects us to nature and our essential being

GarCo CARES Open House Comments

	29				Light Pollution is invasive...similar to noise pollution. It is something you can't get away from. We lie in a rural area... it should not be polluted with light; that may be one reason many of us moved from the city!
	32			1	I have benefited. Others should have the right.
	12 (13)	9	#4	1	We see flaring a lot. With the winds, it travels far and wide.
	12 (14)	2	Oxygen-yes Ozone @ ground level NO	1	Ground level ozone is a pollutant. It must be regulated and reduced.
	12 (38)	2	Magnum Pavers by Star Precast are an inexpensive way to provide walking paths. They are also kind to the environment.	1	Right on! Keep our paths. Add more.
	13 (13)		Not may they do		
	18 (16)	1	Misuse of lawn garden products. Go Organic People.	1	This is something we must all pay attention to. Education about this danger will help.
	18 (6)			1	Emissions feed into air pollution. We must keep tabs on this. Keep to a minimum.
	19 (28)	1			
	19 (32)			1	It is important to keep Radon out of our homes. It is dangerous and can effect human health.
	24 (7)	2		3	Blank
	25 (35)	5	#1	3	Dust is a problem. Any thing that compromises air quality can be a worry to those with respiratory illness. The production of dust must be controlled.
	25 (35)				Blank
	25 (35)				The dust storms have increased in intensity since we moved here six years ago.

GarCo CARES Open House Comments

	25 (39)			1	Polluted water from construction sites and other industrial processes should not be released into our streams, or the paths that lead to our streams.
	25 (7)				Emissions pollute regardless of the location.
	26 (20)			1	Immunizations are important and must continue.
	26 (7)				This one and #29 are related.
	30 (5)	1		1	It makes sense that electro magnetic fields could pose a danger to human health but I am not sure the science has born this out from overhead transmission lines.

Parachute

	1	1			
	2	3			
	5	4	Long term exposure to an elevated level of Benzene may cause health impact- Chronic Exposure		
	6	4		1	The major danger via frac chemicals or any other over the road chemical transport is an accident on the road not in fracing
	7	1			
	9	1			
	10	1			
	11	1		1	I object to this question- it states a fact that may not be able to be proven
	12 (13)	2		1	Flaring of gas well emissions is an accepted and required method to destroy volatiles in gas emissions and tank vapor emissions
	12 (14)	3			
	12 (38)	1			
	13	1		1	Using the word "may" in several of these questions is like saying "Hayley's comet may fall on Battlement Mesa."
	17	1			

GarCo CARES Open House Comments

	18 (6)	3			
	18 (16)	2	More recycling is always needed.		
	22	1			
	25 (7)	2		1	Drilling operations do not produce any significant VOC emissions that could be of concern. It is equivalent to a few vehicles burning diesel fuel traveling the highway from diesel generators powering the drill rig.
	27	2			
	30 (37)	1			

Carbondale

	1	2			
	2	3	Enforcing established laws and success re: goals @ law inception		
	2		Trish		
	3	2	Open food choices and filthy mouse infested restaurants Trish		
	4	1	Trish		
	6	2	Same as 8, 29, 13, 7		
	7	2	Water quality in general is an issue important to Janet Buch- Asst Planner-Carbondale		
	8	4	This is a viable, long term step towards Env. Health	1	Blank
	9	1			
	10	1			
	11	1			
	12 (13)	2		1	Blank
	12 (14)	1	IPS in Carbondale uses toxic fumes to pollute air that is harmful to humans Trish		
	12 (38)	2	Positive encouragement!		
	13	1			
	14	1			
	16	1			

GarCo CARES Open House Comments

	11	2		1	This has driven people off their property in the western end of the county. The county's response was historically inadequate
	12 (13)	2			
	12 (14)	2	Get infrared camera at county Health Dept to monitor gas well emissions (VOC's)	2	Both Blank
	12 (38)	2		1	Simple little acts add up to big differences
	13	1			
	16	1			
	18 (6)	1			
	18 (16)	2		1	We need places to bring unused medicines (rather than flushing them)
	19 (28)	1		1	There is an unusual amount of retaliation against employees who have accidents in the gas production industry. Safety laws must be enforced.
	20	2		1	Silent killer #1
	21	4			
	24	3	Trains!!! Highways "echo" factor in NC	1	Go for grant money <solid?> abatement between railroad and alley
	25 (7)	1		1	Not just in Battlement- the wind carries it east!
	29	1		1	We want to see the stars!
	32	1		2	There is next to no public education on this. Where is CDPHE?
	32				Fluoride is a poisonous by-product of Aluminum production linked to Glandular Diseases.
	34	3			

Rifle

	1	1			
	2	5	Yes! No inspections, threats and payoffs by violators		

GarCo CARES Open House Comments

	25 (35)	1	I am concerned about living close to I-70. I feel there is air pollution due to traffic and gravel pits near Rifle.	1	We have had to leave our home on many occasions due to dust and fumes.
	26 (20)	1			
	29			1	There is a lot of unnecessary light pollution from equipment yards around Rifle. Why can't they buy lights that face downwards?
	30 (37)	1	Actinia Keritoses should be a point of education		
	32	2			
	34	1			
	35			1	I think this would be a great idea especially when people are walking more. Bike trails

Silt

	2	1			
	3	2			
	4	4			
	7	1			
	8	3		1	There is no parcel of land in Garfield County Zone for recycling
	10	1			
	12	3			
	13	1			
	14	1			
	15	2			
	16	1			
	18 (6)	2			
	19 (28)	2			
	19 (32)	1			
	21	1			
	22	1			
	26	1			
	31	1			
	34	1
